

**REMARKS**

The closest reference to the parent application is U.S. Pat. No. 6,380,485 which essentially discloses each twinax wire being inherently equipped with/grasped by a grounding clip and successively attached to the printed circuit board.

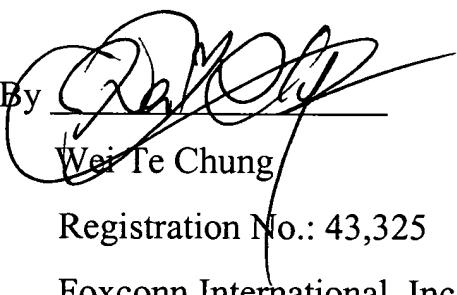

The claims in the instant invention define over that reference by specifying the unrelated/unfixed relationship between the shielding metallic plate and the neighboring wires aside or the spacer behind. The structure and manufacturing differences between the instant application and that reference may be referred to the attachment of the Examiner amendment in the parent application which was submitted by the applicant during prosecution.

Applicant has made an earnest effort to put the subject application in condition for allowance. Allowance, passage and issuance of the claims are respectfully requested.

Respectfully submitted,

Wu
